

**1. Periferal Assembly (Production)**

All the periferal contained in the final products are constructed or finalized.

2. Assembly Line 1 & 2 (Operators)

The different periferal parts are assembly in the specific areas according the planning instructions

3. Assembly (Operators)

Assembly the specific parts "step by step" according to each Assembly Manual: [\[03C03\] Manufacturing-WorkStations - OneDrive \(sharepoint.com\)](#)

4. Validation Process (Qualified Operator)

After the assembly a bunch of validation tests must be preformed according with the instruction of Addam software.

If occurs a NOK on the validation process, then the failure should be analysed and identified if it's possible to do a internal repair, if not, the part should be addressed to the NC Warehouse for further evaluation.

If the validation is OK, a report should be emitted and the part adressed to the stock warehouse.
